CLAIMS (as amended per response mailed on January 10, 2005)

1 (currently amended). A head for an electric toothbrush, comprising:

a first bristle support which is rotatable about an axis;

a plurality of first bristles extending from a surface of the first bristle support, all of the first bristles extending from the first bristle support extending in a perpendicular direction from the first bristle support;

a second bristle support; and

a plurality of second bristles extending from a surface of the second bristle support at an acute angle to the surface, wherein at least some of the second bristles are angled away from at least some of the first bristles, the surfaces of the first and second bristle supports being capable of lying in substantially a same plane during operation of the electric toothbrush.

2 (original). The head of claim 1, wherein the first bristle support is rotatable in an oscillating manner about the axis.

3 (cancelled).

4 (previously presented). The head of claim 1, wherein at least some of the second bristles are angled towards at least some of the first bristles.

5 (cancelled).
